

HEALTH & WELLNESS

The appointment nobody keeps

People miss doctor and clinic visits they already booked. Usually they did not forget. The bus takes too long, the work shift changed, the forms are in the wrong language, or nobody can watch the kids.

How might we help one person actually make it to the care they already scheduled?

START HERE

Who do you know who has missed an appointment? What really stopped them? What would they have needed to hear, and when?

WHERE AI CAN WORK

- Understanding a messy text reply in any language
- Matching a barrier to a fix: a ride, a new time, a video visit
- Pointing someone to the right service on the first try

YOU COULD BUILD

- A reminder assistant that asks “anything in the way?” and offers options
- A navigator: “here is what I need” becomes where to go and what to bring
- A mockup of a clinic screen showing who needs a call today

THINK ABOUT (THIS IS SCORED)

Health information is private; who sees it? Your tool is not a doctor and must never give medical advice. What about someone with no smartphone?

YOUR DAY

- 9:45** Meet your squad. Read this page.
- 10:00** Pick one real person with this problem.
- 10:30** Problem sentence read to your coach.
- 10:30** Build version one.
- 11:45** Lunch
- 12:30** Finish. Make your risks slide.
- 1:10** Stop building. Practice the pitch.
- 1:30** Pitch to your track: 3 minutes.
- 2:15** Finals and awards, Dyer Hall

HOW YOU ARE SCORED

- 25 Problem clarity:** real, specific, belongs to a person
- 25 Use of AI:** AI does real work, not decoration
- 20 Feasibility:** someone could use it and it would matter
- 15 Responsible design:** bias, privacy, who could be harmed
- 15 The pitch:** clear, honest, everyone speaks

Squad name: _____ Who we are building for: _____

YOUR PROBLEM SENTENCE — write it before you build anything

_____ (a real person) struggles with _____
because _____. We will build _____
so they can _____.

YOUR 3-MINUTE PITCH

Meet the person (30 sec). Their problem today (30). What you built and what the AI does, shown live if you can (75). What could go wrong and your safeguard (30). What comes next (15).

RULES

Coaches and mentors help, but never build or present for you. Never type real private information about anyone into an AI tool. Check what the AI tells you; it can be confidently wrong. A working app, a set-up AI assistant, a clickable mockup, or a clear plan with one worked example can all win.
