

CLIMATE & ENERGY

Heat lands unevenly

On the same afternoon, one neighborhood can be far hotter than another a few miles away. Shade, pavement, and housing decide it. The people with the least cooling often hear about help last.

How might we get relief to one person on the hottest day of the year?

START HERE

Where is the hottest place you regularly spend time, and why is it hot there? On the worst day last summer, who near you was most at risk?

WHERE AI CAN WORK

- Matching a resident's situation to nearby relief, in their language
- Describing and scoring photos of a block for shade
- Organizing evidence into a case someone with a budget will read

YOU COULD BUILD

- A heat-day helper that gives a plan for the day
- A shade audit of blocks you know, ranked by need
- A one-page ask to a city office for one specific fix

THINK ABOUT (THIS IS SCORED)

The people most at risk may have no smartphone, no car, and limited English. A map of "risky blocks" can stigmatize a neighborhood. Never point to a vulnerable person's home.

YOUR DAY

- 9:45** Meet your squad. Read this page.
- 10:00** Pick one real person with this problem.
- 10:30** Problem sentence read to your coach.
- 10:30** Build version one.
- 11:45** Lunch
- 12:30** Finish. Make your risks slide.
- 1:10** Stop building. Practice the pitch.
- 1:30** Pitch to your track: 3 minutes.
- 2:15** Finals and awards, Dyer Hall

HOW YOU ARE SCORED

- 25 Problem clarity:** real, specific, belongs to a person
- 25 Use of AI:** AI does real work, not decoration
- 20 Feasibility:** someone could use it and it would matter
- 15 Responsible design:** bias, privacy, who could be harmed
- 15 The pitch:** clear, honest, everyone speaks

Squad name: _____ Who we are building for: _____

YOUR PROBLEM SENTENCE — write it before you build anything

_____ (a real person) struggles with _____

because _____. We will build _____

so they can _____.

YOUR 3-MINUTE PITCH

Meet the person (30 sec). Their problem today (30). What you built and what the AI does, shown live if you can (75). What could go wrong and your safeguard (30). What comes next (15).

RULES

Coaches and mentors help, but never build or present for you. Never type real private information about anyone into an AI tool. Check what the AI tells you; it can be confidently wrong. A working app, a set-up AI assistant, a clickable mockup, or a clear plan with one worked example can all win.
